GAME255
DATA STRUCTURES AND DESIGN PATTERNS

LAB 6: DEPTH FIRST TRAVERSAL

PROFESSOR: Jean – Paul Amore
GRADE VALUE: 25 Marks = 6% of Final Grade

END DATE: Week 10

LEARNING OUTCOMES   Be able to use and build vectors, list, stacks, queues, trees and graphs.
TARGETTED:

REQUIREMENTS:

Use the Adjacency Matrix solution to implement the depth first traversal as described in class. Use Graphs.h to complement the functionality of main.cpp.

i.e.

DELIVERABLES:

Submit the implemented traverse method inside Graphs.h.

LAB #6						
CRITERIA	**0 POINTS**	**1 POINT**	**2 POINTS**	**3 POINTS**	**4 POINTS**	**5 POINTS**
1. LOGIC	Did not submit	Does not demonstrate ability to use logical process	Poorly demonstrates ability to use logical process	Somewhat demonstrates ability to use logical process	Demonstrates ability to use logical process	Demonstrates exceptional ability to use logical process
2. EFFICIENCY	Did not submit	Does not demonstrate any efficiency	Poorly demonstrates efficiency	Demonstrates some efficiency	Demonstrates efficiency	Demonstrates exceptional efficiency
3. FUNCTIONALITY	Did not submit	Asset is not functional	Asset is barely functional	Asset is somewhat functional	Asset is functional	Asset is exceptionally functional
4. PROCESS & ORGANIZATION	Did not complete assigned work	No code follows a systematic and organized approach to problem solving	Parts of code follows a systematic and organized approach to problem solving	Some code follows a systematic and organized approach to problem solving	Most code follows a systematic and organized approach to problem solving	All code follows a systematic and organized approach to problem solving
5. TEST CASE	Did not complete assigned work	Does not compile	Barely any code functions with test case	Partially functions with test case	Mostly functions with test case	Fully functions with test case
